College of Engineering, Construction and Living Sciences
Bachelor of Information Technology
Year Two - Special Topic
Level 6, Credits 15

Project 2: React

Assessment Overview

In this assessment, you will develop a **CRUD** application using **React** & deploy it to **AWS Amplify**. This application will consume either your **REST** or **GraphQL** API from the **Project 1: REST/GraphQL APIs** assessment. The main purpose of this assessment is not just to build a full-stack application, rather demonstrate an ability to decouple the presentation layer (**frontend**) from the business logic (**backend**). Also, you will be required to research and implement pagination, deployment, automated code formatting & end-to-end testing. In addition, marks will be allocated for code elegance, documentation & **Git** usage.

Learning Outcome

At the successful completion of this course, learners will be able to:

1. Design, create & deploy microservices using a range of industry-relevant technologies.
2. Critically reflect on & evaluate own learning to identify ways of further personal development.

Assessment Table

Assessment Activity	**Weighting**	**Learning Outcome**	**Assessment Grading Scheme**	**Completion Requirements**
Project 1: REST/GraphQL APIs	40%	1	CRA	Cumulative
Project 2: React	40%	1	CRA	Cumulative
Evaluative Conversation	20%	2	CRA	Cumulative

Conditions of Assessment

You will complete this assessment during your learner-managed time, however, there will be availability during the weekly meetings to discuss the requirements. This assessment will need to be completed by **Friday, 11**

February 2022 at 5:00 PM.

Pass Criteria

This assessment is criterion-referenced (CRA) with a cumulative pass mark of **50%** across all assessments in **Year Two - Special Topic**.

Authenticity

All parts of your submitted assessment must be completely your work & any references must be cited appropriately. Provide your references in a **README.md** file. Failure to do this will result in a mark of **zero** for this assessment.

Policy on Submissions, Extensions, Resubmissions & Resits

The school's process concerning submissions, extensions, resubmissions & resits complies with **Otago Polytechnic** policies. Learners can view policies on the **Otago Polytechnic** website located at https://www.op.ac.nz/about-us/governance-and-management/policies.

Submissions

You must submit all program files via **GitHub**. You will need to create a new repository & add **grayson-orr** as a collaborator. The latest program files in the **main** branch will be used to mark against the **Functionality** criterion. Please test your **main** branch application before you submit. Partial marks **will not** be given for functionality in other branches. Late submissions will incur a **10% penalty per day**, rolling over at **5:00 PM**.

Extensions

Familiarise yourself with the assessment due date. If you need an extension, contact the course lecturer before the due date. If you require more than a week's extension, a medical certificate or support letter from your manager may be needed.

Resubmissions

Learners may be requested to resubmit an assessment following a rework of part/s of the original assessment. Resubmissions are to be completed within a negotiable short time frame & usually must be completed within the timing of the course to which the assessment relates. Resubmissions will be available to learners who have made a genuine attempt at the first assessment opportunity & achieved a **D grade (40-49%)**. The maximum grade awarded for resubmission will be **C-**.

Resits

Resits & reassessments are not applicable in **Year Two - Special Topic**.

Instructions

You will need to submit an application & documentation that meet the following requirements:

Functionality - Learning Outcome 1 (45%)

- **Authentication**
  - Register a new user via a form.
  - User can login and logout.
- **CRUD**
  - Request **API** data from at least three **API** resource groups using **Axios**.
  - Create new **API** data via a form. You can display the form on the page or in a modal.
  - View **API** data in a table.
  - View **API** data in a table using an id. For example, **/institutions/1** would return **API** data for that specific **Institutions** object.
  - Update **API** data via a form. Similar to creating **API** data, you can display the form on the page or in a modal.
  - Delete **API** data. Prompt the user for deletion. You **can** use the in-built **confirm() JavaScript** function.
  - Incorrectly formatted form field values handled gracefully using validation error messages, i.e., **first name** form field is required.
- Paginate **API** data across several pages with **next** & **previous** buttons or links. You can choose the number of **API** data per page.
- Search **API** data via a search bar.
- User-interface is visually attractive with a coherent graphical theme & style using **Material Design**.
- Application deployed to **AWS Amplify**.
- **Cypress** end-to-end tests that test the register, login and logout functionality. You **must** declare a **npm** script in your application's **package.json** file which automates this process.

Code Elegance - Learning Outcome 1 (45%)

- Idiomatic use of control flow, data structures & in-built functions.
- Sufficient code modularity, i.e., UI split into independent reusable pieces.
- Components written as functional, not class.
- Adheres to a client-server architecture, i.e., the presentation layer is separate from the business logic.
- Function header & in-line comments explaining complex logic.
- Code files are formatted using **Prettier**. You **must** declare a **npm** script in your application's **package.json** file which automates this process. Rules **must** include:
  - Single quote is set to **true**.
  - Semi-colon is set to **false**.
  - Tab-width is set to **2**.
- **Prettier** & **Cypress** are installed as development dependencies.
  - **Resource:** https://docs.npmjs.com/specifying-dependencies-and-devdependencies-in-a-package-json-file
- No dead or unused code.

Documentation & Git Usage - Learning Outcome 1 (10%)

- Provide the following in your repository **README.md** file:
  - URL to the application on **AWS Amplify**.
  - How do you setup the environment for development, i.e., after the repository is cloned, what do you need to run the application locally?
  - How do you deploy the application to **AWS Amplify**?
  - How do you run the **Cypress** tests?
- Commit messages **must**:
  - Reflect the context of each functional requirement change.
  - Be formatted using the naming conventions outlined in the following:
    - **Resource:** https://dev.to/i5han3/git-commit-message-convention-that-you-can-follow-1709

Additional Information

- You **must** commit at least **five** times per week. By the end of this assessment, you should have at least **50** commits.
- **Do not** rewrite your **Git** history. It is important that the course lecturer can see how you worked on your assessment over time.
