

College of Engineering, Construction and Living Sciences
Bachelor of Information Technology
ID607001: Introductory Application Development Concepts
Level 6, Credits 15
Project 1: Node.js REST API

Assessment Overview

In this **individual** assessment, you will develop a **REST API** using **Node.js** and deploy it as a **web service** on **Render**. You will choose the theme of your **REST API**. It could be on sport, culture, food or something else you are interested in. Your data will be stored in a **PostgreSQL** database on **Render**. The main purpose of this assessment is to demonstrate your ability to develop a **REST API** using taught concepts such as queries, relationships, validation, etc. In addition, marks will be allocated for code elegance, documentation and **Git** usage.

Learning Outcome

At the successful completion of this course, learners will be able to:

1. Design and build secure applications with dynamic database functionality following an appropriate software development methodology.

Assessments

Assessment	Weighting	Due Date	Learning Outcomes
Practical: Node.js REST API Testing	20%	11-09-2023 (Monday at 04.59 PM)	1
Project 1: Node.js REST API	40%	11-09-2023 (Monday at 04.59 PM)	1
Project 2: React CRUD	40%	13-11-2023 (Monday at 04.59 PM)	1

Conditions of Assessment

You will complete this assessment during your learner-managed time. However, there will be time to discuss the requirements and your assessment progress during the teaching sessions. This assessment will need to be completed by **Monday, 11 September 2023 at 4.59 PM**.

Pass Criteria

This assessment is criterion-referenced (CRA) with a cumulative pass mark of **50%** across all assessments in **ID607001: Introductory Application Development Concepts**.

Submission

You must submit all program files via **GitHub Classroom**. Here is the URL to the repository you will use for your submission – <https://classroom.github.com/a/wJ4pC7Y7>. Create a **.gitignore** and add the ignored files in this resource - <https://raw.githubusercontent.com/github/gitignore/main/Node.gitignore>. The latest program files in the **master** or **main** branch will be used to mark against the **Functionality** criterion. Please test your **master** or **main** branch application before you submit. Partial marks **will not** be given for incomplete functionality. Late submissions will incur a **10% penalty per day**, rolling over at **5:00 PM**.

Authenticity

All parts of your submitted assessment **must** be completely your work. Do your best to complete this assessment without using a **AI generative tool**. You need to demonstrate to the course lecturer that you can meet the learning outcome for this assessment.

However, if you get stuck, you can use a **AI generative tool** to help you get unstuck, permitting you acknowledge that you have used **AI generative tool**. In the assessment's repository **README.md** file, please include what prompt(s) you provided to the **AI generative tool** and how you used the response(s) to help you with your work. It also applies to code snippets retrieved from **StackOverflow** and **GitHub**.

Failure to do this may result in a mark of **zero** for this assessment.

Policy on Submissions, Extensions, Resubmissions and Resits

The school's process concerning submissions, extensions, resubmissions and resits complies with **Otago Polytechnic | Te Pūkenga** policies. Learners can view policies on the **Otago Polytechnic | Te Pūkenga** website located at <https://www.op.ac.nz/about-us/governance-and-management/policies>.

Extensions

Familiarise yourself with the assessment due date. If you need an extension, contact the course lecturer before the due date. If you require more than a week's extension, a medical certificate or support letter from your manager may be needed.

Resubmissions

Learners may be requested to resubmit an assessment following a rework of part/s of the original assessment. Resubmissions are to be completed within a negotiable short time frame and usually **must** be completed within the timing of the course to which the assessment relates. Resubmissions will be available to learners who have made a genuine attempt at the first assessment opportunity and achieved a **D grade (40-49%)**. The maximum grade awarded for resubmission will be **C-**.

Resits

Resits and reassessments are not applicable in **ID607001: Introductory Application Development Concepts**.

Instructions

You will need to submit a **REST API** and documentation that meet the following requirements:

Functionality - Learning Outcome 1 (50%)

- **REST API:**

- Developed using **Node.js**.
- Can run locally without modification.
- A **maximum of eight models**. Each containing a **minimum of four fields** excluding the **id**, **createdAt** and **updatedAt** fields.
- A range of different data types, i.e., all **fields** in a **model** can not be of a single type.
- A minimum of **five relationships** between **models**.
- At least **one model** must have an **enum field**.
- A **controller** and **route** file for each **model**. Each **controller** file must contain operations for **POST**, **GET all**, **GET one**, **PUT** and **DELETE**.
- Return an appropriate success or failure message, and status code when performing the operations, i.e., **"Successfully created an institution"** or **"No institutions found"**.
- The **index route**, i.e., **https://localhost:3000/api/** must display all existing **routes**.
- When creating and updating, validate each **field** using **Joi**.
- Store your data in a **PostgreSQL** database on **Render**.
- Deploy your **REST API** as a **web service** on **Render**.
- **Independent Research Tasks:**
- **Filter** and **sort** your data using **query parameters**. All **fields** should be filterable and sortable (in ascending and descending order).
- **Paginate** your data using **query parameters**. The default number of data per page is 25.
- Return an appropriate message if an endpoint does not exist.
- Limit the number of **API requests** per minute to 100. You must display the following message if the user exceeds the 100 **API requests** per minute - **"You have exceeded the number of requests per minute: 100. Please try again later."**

- **Scripts:**

- Run your **REST API** locally.
- Create and apply a migration using **Prisma**.
- Reset your database using **Prisma**.
- Open **Prisma Studio**.
- Format your code using **Prettier**.

Code Elegance - Learning Outcome 1 (40%)

- A **Node.js .gitignore** file is used.
- Environment variables' key is stored in the **env.example** file.
- Appropriate naming of files, variables, functions and resource groups.
 - Resource groups are named with a plural noun instead of a noun or verb, i.e., **/api/v1/items** not **/api/v1/item**.

- Idiomatic use of control flow, data structures and in-built functions.
- Efficient algorithmic approach.
- Sufficient modularity.
- Each **controller** and **route** file **must** have a **JSDoc** header comment located at the top of the file.
- In-line comments where required. It should be for code that needs further explanation, i.e., the **independent research tasks**.
- Code is formatted using **Prettier**.
- **Prettier** is installed as a **development dependency**.
- No dead or unused code.

Documentation and Git Usage - Learning Outcome 1 (10%)

- Provide the following in your repository **README.md** file:
 - How do you setup the environment, i.e., after the repository is cloned?
 - How do you run your **REST API** locally?
 - How do you create and apply a migration?
 - How do you reset your database?
 - How do you open **Prisma Studio**?
 - How do you format your code?
 - An Entity Relationship Diagram (ERD) of your database.
 - A URL to your **REST API** as a **web service** on **Render**.
 - A URL to your published **REST API** documentation.
- Use of **Markdown**, i.e., headings, bold text, code blocks, etc.
- Correct spelling and grammar.
- Your **Git commit messages** should:
 - Reflect the context of each functional requirement change.
 - Be formatted using an appropriate naming convention style.

Additional Information

- **Do not** rewrite your **Git** history. It is important that the course lecturer can see how you worked on your assessment over time.
