## ID607001: Introductory Application Development Concepts

## Project 1: Node.js REST API Assessment Rubric

	10-9	8-7	6-5	4-0
Providence on to the series of	ST API is developed using ode.js & can run locally without odification.  appropriate number of llections & fields with different ta types.  lationships between collections. parate controller & route file nich contain the appropriate erations for each collection. stom validation when creating updating a field.  llections are seeded with a JSON expenses when performing auth CRUD operations, if a request es not return any data, & if an dpoint does not exist. ter, sort & paginate REST API	REST API contains clear & detailed evidence of functionality on the following:  REST API is developed using Node.js & can run locally without modification.  An appropriate number of collections & fields with different data types.  Relationships between collections. Separate controller & route file which contain the appropriate operations for each collection. Custom validation when creating & updating a field. Collections are seeded with a JSON file. REST API version is v1. A message when performing auth & CRUD operations, if a request does not return any data, & if an endpoint does not exist. Filter, sort & paginate REST API data. GET, POST, PUT & DELETE routes are protected. Rate limit is 25 requests per minute. HTTP headers secured. REST API data is stored in a MongoDB Atlas database.	<ul> <li>REST API contains evidence on the following:         <ul> <li>REST API is developed using Node.js &amp; can run locally without modification.</li> <li>An appropriate number of collections &amp; fields with different data types.</li> <li>Relationships between collections.</li> <li>Separate controller &amp; route file which contain the appropriate operations for each collection.</li> <li>Custom validation when creating &amp; updating a field.</li> <li>Collections are seeded with a JSON file.</li> <li>REST API version is v1.</li> <li>A message when performing auth &amp; CRUD operations, if a request does not return any data, &amp; if an endpoint does not exist.</li> <li>Filter, sort &amp; paginate REST API data.</li> <li>GET, POST, PUT &amp; DELETE routes are protected.</li> <li>Rate limit is 25 requests per minute.</li> <li>HTTP headers secured.</li> <li>REST API is deployed to Heroku.</li> <li>REST API data is stored in a MongoDB Atlas database.</li> </ul> </li> </ul>	REST API does not, or does not fully contain evidence on the following:  REST API is developed using Node.js & can run locally without modification.  An appropriate number of collections & fields with different data types.  Relationships between collections. Separate controller & route file which contain the appropriate operations for each collection.  Custom validation when creating & updating a field. Collections are seeded with a JSON file. REST API version is v1. A message when performing auth & CRUD operations, if a request does not return any data, & if an endpoint does not exist. Filter, sort & paginate REST API data. GET, POST, PUT & DELETE routes are protected. Rate limit is 25 requests per minute. HTTP headers secured. REST API data is stored in a MongoDB Atlas database.

ID607001: Introductory Application Development Concepts

Project 1: Node.js REST API Version 1, Semester One, 2022

Code Elegance	REST API thoroughly demonstrates code elegance on the following:  Intermediate variables, idiomatic control flow, data structures & inbuilt functions, & sufficient modularity.  Functions & variables are named appropriately.  Efficient algorithmic approach.  REST API groups are named with a plural.  File header & in-line comments.  Formatted code using Prettier.  Prettier installed as a dev dependency.  No dead or unused code.  Database configured for production environment.	REST API clearly demonstrates code elegance on the following:  Intermediate variables, idiomatic control flow, data structures & inbuilt functions, & sufficient modularity.  Functions & variables are named appropriately.  Efficient algorithmic approach.  REST API groups are named with a plural.  File header & in-line comments.  Formatted code using Prettier.  Prettier installed as a dev dependency.  No dead or unused code.  Database configured for production environment.  Environment variables stored.	REST API demonstrates code elegance on the following:  Intermediate variables, idiomatic control flow, data structures & inbuilt functions, & sufficient modularity.  Functions & variables are named appropriately.  Efficient algorithmic approach.  REST API groups are named with a plural.  File header & in-line comments.  Formatted code using Prettier.  Prettier installed as a dev dependency.  No dead or unused code.  Database configured for production environment.  Environment variables stored.	REST API does not or does not fully demonstrate code elegance on the following:  Intermediate variables, idiomatic control flow, data structures & inbuilt functions, & sufficient modularity.  Functions & variables are named appropriately.  Efficient algorithmic approach.  REST API groups are named with a plural.  File header & in-line comments.  Formatted code using Prettier.  Prettier installed as a dev dependency.  No dead or unused code.  Database configured for production environment.  Environment variables stored.
Documentation & Git Usage	REST API documented in succinct detail using Postman.  README file contains thorough evidence of:	REST API documented in substantial detail using Postman.  README file contains clear evidence of:	REST API documented in detail using Postman.  README file contains evidence of:  • URL to the REST API on Heroku.  • URL to the REST API documentation on Postman.  • How to setup the environment for development & deploy the REST API.  Use of Markdown syntax, i.e., headings, bold text & code blocks.  Spelling & grammar correctness.  Git commit messages are formatted & reflect the functionality changes in detail.	REST API not or not fully documented in detail using Postman.  README file does not or does not fully contain evidence of:  URL to the REST API on Heroku.  URL to the REST API on Heroku.  How to setup the environment for development & deploy the REST API.  Does not or does not fully demonstrate use of Markdown syntax, i.e., headings, bold text & code blocks.  Does not or does fully demonstrate spelling & grammar correctness.  Git commit messages are not or are not fully
				formatted & do not or do not reflect the functionality changes.
