Functionality – Your choice REST API	The Express REST API developed using Node.js contains comprehensive and robust evidence on the following functionality: development and production modification, models, data types, relationships, enum, files, messages, filtering, sorting, pagination, a 404 endpoint, validation, Swagger documentation, PostgreSQL database, deployment and scripts.	The Express REST API developed using Node.js contains clear and detailed evidence on the following functionality: development and production modification, models, data types, relationships, enum, files, messages, filtering, sorting, pagination, a 404 endpoint, validation, Swagger documentation, PostgreSQL database, deployment and scripts.	The Express REST API developed using Node.js contains evidence on the following functionality: development and production modification, models, data types, relationships, enum, files, messages, filtering, sorting, pagination, a 404 endpoint, validation, Swagger documentation, PostgreSQL database, deployment and scripts.	The Express REST API developed using Node.js does not or does not fully contain evidence on the following functionality: development and production modification, models, data types, relationships, enum, files, messages, filtering, sorting, pagination, a 404 endpoint, validation, Swagger documentation, PostgreSQL database, deployment and scripts.
	10-9	8-7	6-5	4-0
Functionality – OpenTDB API	The Express REST API developed using Node.js contains comprehensive and robust evidence on the following functionality: development and production modification, enums, models, admin user, basic user, validation, seeding, Helmet, rate limiting, compression, Swagger documentation, PostgreSQL database, deployment and scripts.	The Express REST API developed using Node.js contains clear and detailed evidence on the following functionality: development and production modification, enums, models, admin user, basic user, validation, seeding, Helmet, rate limiting, compression, Swagger documentation, PostgreSQL database, deployment and scripts.	The Express REST API developed using Node.js contains evidence on the following functionality: development and production modification, enums, models, admin user, basic user, validation, seeding, Helmet, rate limiting, compression, Swagger documentation, PostgreSQL database, deployment and scripts.	The Express REST API developed using Node.js does not or does not fully contain evidence on the following functionality: development and production modification, enums, models, admin user, basic user, validation, seeding, Helmet, rate limiting, compression, Swagger documentation, PostgreSQL database, deployment and scripts.
